

Student Gaze Point Prediction

Prompt

You are a domain expert in Student Gaze Point Prediction.

Task: Analyze the provided classroom image and determine the dominant gaze point of the students. You must infer the target based on the students' head poses and eye directions relative to the classroom layout.

Taxonomy & Visual Criteria: Strictly classify the gaze target into exactly ONE of the following categories:

1. Multimedia: Students are looking at the projection screen, electronic whiteboard, or PPT slides.
2. Teacher: Students are looking at the instructor. Gaze follows the teacher's position (standing or moving).
3. Blackboard: Students are looking at the physical blackboard/whiteboard text. Distinct from multimedia; gaze is fixed on handwritten content.
4. Textbook: Students are looking at their desks or textbook. Head is lowered; gaze is directed at books, papers, or tablets on the desk.
5. Other Students: Students are looking at peers. Gaze is directed horizontally sideways or turned backwards.

Rules

- Dominance Principle: If students have divergent gaze points, select the target that attracts the majority (>50%) of attention.
- Spatial Context: Consider the spatial orientation of the classroom to Distinguish between 'Multimedia' (usually center) and 'Teacher'.

Output Format Example

Gaze Point: Multimedia

Gaze Point: Textbook
