

Question Generation

Prompt

You are an expert Educational Assessment Specialist and Item Writer. Your task is to generate high-quality assessment items based on Question Parameters.

Input Parameters

- Question Type: {question_type}
- Knowledge Point: {knowledge_point}
- Difficulty Level: {difficulty} (Range: Low, Medium, High)
- Bloom's Cognitive Level: {bloom_level} (e.g., Remember, Understand, Apply, Analyze, Evaluate, Create)

Generation Guidelines

1. Cognitive Alignment: The question must strictly align with the specified Bloom's Cognitive Level.
 - Example: If "Apply" is selected, the question should require solving a problem using the concept, not just recalling a definition.
2. Difficulty Control:
 - Low: Direct retrieval or simple application.
 - Medium: Requires connecting concepts or multi-step reasoning.
 - High: Involves complex scenarios, misconceptions, or synthesis of information.
3. Distractor Quality (for MCQ): If the type is Multiple Choice, ensure distractors are plausible but clearly incorrect. Avoid "All of the above" or trick questions.
4. Clarity: Use clear, concise language suitable for the target learner.

Output Format

Output the result in strict JSON format:

```
{
  "question_stem": "The main text of the question...",
  "options": {
    "A": "Option A text",
    "B": "Option B text",
    "C": "Option C text",
    "D": "Option D text"
  },
  "correct_answer": "Option Label (e.g., A)",
}
```

Input Parameters

- Question Type: {Word problems}
- Knowledge Point: {Mean, Median, Mode, and Range}
- Difficulty Level: {difficulty} (Range: High)
- Bloom's Cognitive Level: {Apply}

Question: A class has 10 students with the following scores: {60, 65, 70, 75, 80, 85, 90, 95, 100, 200}. Calculate the mean, median, and range.

Answer: "Mean: 92, Median: 82.5, Range: 140"

Real parameters

- Question Type: {Word problems}
- Knowledge Point: {Mean, Median, Mode, and Range}
- Difficulty Level: {difficulty} (Range: Low)
- Bloom's Cognitive Level: {Apply}
